QA

Q How to make the painting better?

A To get better effect, pls note a. The color match, do not print light color picture directly on the nails as it is light pink. b. All the picture will much more beautiful if it print on the white background, you may print a layer of normal white nail polish before the coating. That is: white nail polish-coating-ink printing-normal transparent nail oil. However, half people will prefer the original nail color as background, as it looks natural. in this case, the process will be: tansparent nail polish-coating-ink printing-normal transparent nail oil. When beautifying flower, the transparent polish may not necessary. When beautifying adornment, the white nail polish is depends. c. When printing, pls keep the nail and the nail clamps slab on the same level.

Q Your price is higher than the others I got, could you tell me why?

A Our printer is almost the best printer in the national market. you may compare a printer from `its` software functions, beautifying devices, coating, cartridges, printing effect ,pictures database ,the CE certificate or FCC certificate and even if having the demo disk. We are almost the best in all these aspects.
